agricultural technology and management have been developed because of the demand for human resources in that profession across the country.

The Specialized Degree
The students who study graduate courses in Agriculture get the opportunity to take up a specialized course offered by the university in their third year. These include Plant Management, Biotechnology and Agri-business Management. As an agriculture based country, there is a great demand for graduates in agriculture for employment related to the three sectors of, research, management and popularizing knowledge of plantation indus-

in Sri Lanka for improving medical research and treatment are directly targeted at the professions related to hospitals. Undergraduate study programs such as Nursing, Pharmacology, Radiation, Medical Laboratory Equipment and Physiotherapists, are the foundation for accessing these fields. The Government is also developing policies to ensure that those graduates are admitted to government hospitals.

If you study biology for A/Ls, you can take the opportunity to study a Bachelor of Science degree by entering the science faculty at a state university. Degree courses differ from one university to another, but many universities offer zoology, phythology, chemistry, physics, statistics and mathematics as main subject fields. Based on the performance of the first two years, selected students will be able to follow four-year specialized science courses.

Post Graduate Degree

According to the field of their graduate course, they can follow the path of studying postgraduate courses (M.Phil and MSc) as well. Based on the enthusiasm and the talent of the student, it is possible for them to become a specialist in the field of science, eventually reaching for a Doctor's degree. Further, these postgraduate and PhD degrees can be completed in Sri Lanka, and currently international universities provide many scholarships for higher education in various fields in science stream. There are many students who have obtained these foreign scholarships and succeeded in their career.

So do not be afraid. Do not be hesitant if you do not get qualified to enter the medical faculty having studied biology. There are many other professional fields for students who study biology even this article did not mention. Therefore, you too can win the game with science. Take interest. Be committed. Study the subjects of science with desire. Then you will soar in the world with the knowledge of science.

Biology Subjects to Guide Your Life!!!

If you are a student in biology, isn't your prime purpose to be a doctor one day? It is very important and a productive goal for the country and hence when you are not able to enter university with your first shy, you endeavor to enter medical faculty on the second or third shy. However, only 1,300 admissions are enrolled in government universities annually, even though the number of students entering university and the number of students who enroll for the Advanced Level exams are increasing every year. This message will be very important to you in your efforts to be counted among the best students in this highly competitive examination.

Top Privileges

From childhood, our parents instill in our minds the desire to be doctors as the medical profession has been a very reputed career of choice. But today, there is a huge increase in the number of biol-

ogical related professions, both locally and overseas. The wages for some of these professions are high when compared to that of a doctor. International recognition is also very high, but the sad news is that both the students and parents have very little knowledge of these other professions and newer fields of biology. You may have heard or seen of students who have qualified to enter medical faculty but choose to take up courses related to biology or molecular biology. Some of you will find this a foolish thing to do. But you will be surprised to learn of what he has achieved in only six years. Today we will enlighten you on the fields that you can take up at university, if you are a student of biology.

Veterinary Field

If you do not qualify to enter the medical or dental faculty, you will be able to enter the Veterinary Faculty. The profession of many veterinary professionals is very popular and there is a great demand in Sri Lanka as well as foreign countries for the profession. Veterinary surgeons have a great demand in pet health, livestock development and the fields of veterinary research.

If you do not

qualify to enter the medical or dental faculty, you will be able to enter the Veterinary Faculty. The profession of many veterinary professionals is very popular and there is a great demand in Sri Lanka as well as foreign countries for the profession.

tries such as tea, coconut and rubber in Sri Lanka. Also, large scale agribusiness holders in the plantation industries provide such graduates with high quality jobs and you can climb up the professional ladder by joining such large companies.
